Subject Index

A

ABRO1, 333
 ACD. *See* Asymmetric cell division
 Adenomatous polyposis coli (APC), 18, 141
 AIR-2, 228
 Anaphase-promoting complex/cyclosome (APC/C)
 inactivation in late mitosis, 116
 initiation during G₂, 113
 overview, 111, 350, 386–387
 prospects for study, 116–117
 regulation in mitosis
 kinetochore mediation
 Cdc20 activation through
 dephosphorylation, 134, 387
 inhibition by spindle assembly
 checkpoints, 114–116
 integration of activation and
 inhibition mechanisms, 116
 phosphorylation, 113–114
 structure, 112
 ubiquitination mechanism, 112–113
 ANT-C, 298, 302
 APC. *See* Adenomatous polyposis coli
 APC/C. *See* Anaphase-promoting complex/cyclosome
 ASF, 179
 Asf1, 4, 161
 Ash1, 312
 Aster
 chromosome passenger complex and
 centralspindlin recruitment,
 167–170
 growth and recruitment of furrow-
 stimulating complexes,
 166–167
 Asymmetric cell division (ACD), 305, 309, 311, 313–315, 416
 ATF5, 151
 ATM, 210, 241
 ATR, 240–242
 ATRIP, 242
 ATRX, 3–5, 355
 Aurora kinases
 Aurora A kinase
 functions at kinetochore, 93–94, 96
 overview, 92
 recruitment to centromere/kineto-
 chore region, 94–95
 Aurora B kinase, 91–92, 95–96, 177–179
 Aurora C kinase, 92
 overview, 91–92
 substrate specificity, 95–96

Azidothymidine (AZT), 238–240
 AZT. *See* Azidothymidine

B

BAF. *See* Barrier-to-autointegration factor
 Barrier-to-autointegration factor (BAF), 351
 Basal body
 biogenesis
 de novo assembly, 126–130
 deuterosome-mediated biogenesis,
 124–126
 duplication, 123–124
 mechanisms, 130–131
 prospects for study, 132–133
 evolutionary history, 131–132
 overview, 123
 Bdf1, 39
 Bdf2, 39
 BET proteins
 chromatin domain boundary formation,
 40–41
 insulator and architectural function,
 39–40
 local chromatin environment regulation,
 38–39
 nuclear structure maintenance, 37–38
 overview, 37
 prospects for study, 41
 Bicentriole, 126, 128–129
bioRxiv, 404–405
 Blepharoplast, 126, 129–130
 BLM, 188–190, 192, 207, 210
 Bloom syndrome, 207
 BLZ-2, 364
 BMP. *See* Bone morphogenetic protein
 BOD1L, 333
 Bone morphogenetic protein (BMP), female
 germ cell sex determination
 and meiotic induction
 signaling, 217–219
 Borealin, 92
 BRCA1, 21, 242, 330, 333, 339–343
 BRCA2
 deficiency
 consequences, 330–331
 degradation factors and fork
 dynamics, 340–343
 p53 induction, 331–332
 homologous recombination role,
 329–330, 357, 400–401
 replication fork protection, 329–330,
 339–340
 therapeutic targeting, 334–335
 tumor suppression, 329, 339
 BRD-1, 21
 BRD2, 37–40

BRD3, 37–39
 BRD4, 37–39
 BRDT, 38
 BRG1, 16
 BTRR complex, 190–191
 Bub1, 114, 116, 200, 260, 262–263
 Bub3, 115, 260, 262
 BX-C, 298, 302

C

Cabin1, 4
 CAF-1, 2, 4
 Cardiac stem cell, 314
 CBF3, 72
 CD113, 315
 Cdc20. *See* Anaphase-promoting
 complex/cyclosome
 CDC42, 252, 254–255, 354
 Cdc48, 178
 Cdh1, 113, 116
 Cdk1, 113–114, 159
 Cdk5, 116
 CED-3, 230
 CENP-A, 3–7, 9–10, 29–30, 71, 75–76, 93, 188, 249–252, 255–256, 309, 354–355
 CENP-B, 71, 75–76, 79, 250, 252, 354–355
 CENP-C, 71, 76, 249–250, 252, 255–256
 CENP-N, 29–30
 CENP-T, 76
 CENP-TWSX, 76
 Centralspindlin, aster recruitment,
 167–170
 Centrin, 126–127, 130–132
 Centriole
 biogenesis
 de novo assembly, 126–130
 deuterosome-mediated biogenesis,
 124–126
 duplication, 123–124
 mechanisms, 130–131
 prospects for study, 132–133
 compound microtubule structure,
 146–148
 evolutionary history, 131–132
 overview, 123, 145–146, 372–374
 structure, 409–412
 triplet microtubules
 elongation, 150–151
 formation
 cartwheel role, 149–150
 centriolar tubulin features,
 148–149
 overview, 148
 functions, 151

- Centromere
 asymmetric sister chromatid
 distinguishing, 308–309
 cenH3 nucleosome positioning at
 satellite centromeres, 75
 cohesion protection in meiosis
 Bub1 role, 262–263
 kinetochore geometry, 260–261
 MEIKIN role in mice, 261–262
 mono-orientation of kinetochores in
 yeast
 Moa1, 261–263
 monopolin, 261
 Rec8, 261
 overview, 259
 evolutionary plasticity of chromatin
 budding yeast, 72–73
 Caenorhabditis elegans, 74
 fission yeast, 73–64
 humans, 76
 insects, 74–75
 prospects for study, 78–79
 overview, 71–72, 250–252
 spring, 375–377
 ultrafine DNA bridges, 188
- Centromere drive
 oocyte meiotic spindle, 252, 254–255
 overview, 249–250
 prospects for study, 256, 391–393
- Centrosome
 aberrations
 cancer studies, 137–143
 chromosome segregation fidelity
 impact, 138–139
 overview, 138
 tissue architecture impact, 139–142
 duplication cycle, 138
 nonrandom sister chromatid segrega-
 tion, 309–311
 overview, 137
- CEP120, 150
 CEP135, 148, 132
 Cep152, 126
 CEP295, 150
 CHD4, 341
 CHK1, 241
 CHK2, 210, 240–242
- Chromatin fiber
 epigenetic regulation by chromatin
 factors, 28–30, 354–355
 nuclear organization, 31–32
 prospects for study, 32–33
 single-molecule studies of dynamics,
 27–28
 structure, 25–27
- Chromocenter
 bundling proteins, 321
 function, 322–323
 genome encapsulation, 321–322
- ChromoShake, 101
- Chromosome loop extrusion. *See also*
 Topologically associating
 domain
 energy budget, 52
 experimental testing of model, 48–50
 model testing challenges, 47
 overview, 352–353
 polymer model with barrier elements,
 45–48
 RotoStep simulation
 condensin stepping, 106
 convolution, 103, 105
 model assumptions, 102
 overview, 101–102
 parameters, 104
 processive motion consequences on
 tethered substrate with *cis*-
 and *trans*-binding, 102–103
 prospects, 106–108
 strand compaction via multiple
 condensins, 105
 tension and loop formation, 105–106
 single-molecule experiments, 50–53
 walking mechanism, 51
- Chromosome passenger complex (CPC)
 aster recruitment, 167–170, 351
 chromatin proteomic regulation,
 178–182
 spindle assembly role, 176–178
- CK1, 261
 Cnn1, 86–87
 Cnp1, 261
- Common fragile sites, ultrafine DNA
 bridges, 188
- COMPASS, 228
- Condensin
 chromatid axis formation, 158–159
 condensin I versus condensin II
 function, 158
 identification in *Xenopus* egg extracts,
 157–158
 mitotic chromatids
 assembly without nucleosomes,
 160–161
 nucleosome cross talk with conden-
 sins, 161
 nucleosome dynamics during
 assembly, 159–160
 reconstitution, 159
 RotoStep simulation of chromosome
 loop extrusion, 101–103,
 105–108
- CP110, 127, 150
 CPAP, 148, 150
 Cpap, 126, 132
 CPC. *See* Chromosome passenger complex
 CpG islands, 15
 Crystallin, 395
 Csm1, 261
 CTCF, 39–41, 45, 47–48, 50–51, 268–271,
 274–275, 352

 genome encapsulation, 321–322
 history of study, 319–320
 pericentromeric satellite DNA
 repression, 320
 roles, 320–321
 speciation role, 323
 Sca-1, 314
 SDC-2, 283
 Securin, 259
 SET-1, 281
 Set1, 228
 Sgo1, 188, 259–260, 262–263
 Sgs1, 224
 Sir2, 225
 SIR3, 39
 SIRT1, 39
 SIRT2, 181
 Sister chromatid segregation
 asymmetric cell division in *Drosophila*, 313
 centrosome role, 309–311
 SLX1, 207, 227–229
 Slx1, 224
 SLX4, 207–209, 227, 229, 335
 Slx4, 224
 Slx5, 225
 Slx8, 225
 SMARCA1, 334, 340–341, 343–344
 SMC proteins, 352–353, 375
 SOX9, 215
 Spc7, 260, 262–263
 Spd5, 131
 Spermatogenesis. *See* Meiosis
 SPO11, 238, 240, 384–385
 Spo11, 224
 Spo13, 261, 263
 Spo16, 224
 Spo22, 224
 SpotLearn. *See* Fluorescence in situ hybridization
 SRp20, 179
 SRY, 215
 STIL, 138
 Stil, 126
 SUMO, 224

Survivin, 92
 Swi6, 262

T

TAD. *See* Topologically associating domain
 TAp63, 240–241, 243
 Tau, 177
 Telomere, ultrafine DNA bridges, 188–189
 TEX19.1, 237
Tfap2c, 272, 274
 TIP-60, 20
 TLS. *See* Translesion synthesis
 Top3, 224
 TOPBP1, 190, 242
 Topo II, 159, 162, 187–190
 Topologically associating domain (TAD)
 cell cycle dynamics, 269–270
 CTCF in insulation and loop formation, 269
 definition, 268
 discovery, 267
 loop extrusion models, 269
 organization mechanisms and dynamics, 268–270
 overview, 267–268
 preimplantation development dynamics, 270
 regulatory landscapes
 chromatin states, 272
 development role, 272–274
 diseases, 274–275
 enhancer–promoter communication, 270–271
 mammalian genome evolution, 274
 overview, 270
 transcriptional co-regulation, 271–272
 unfinished replication regions in polytene chromosomes, 299–300
 TPX2, 92, 94–95, 131, 174
 Translesion synthesis (TLS), fork protection, 345–346
 TREX1, 237–238
 TRF1, 188
 TRF2, 188
 TTBK2, 150
 Tubulin B3, 396

U

UBN1, 4
 UBR2, 237
 UFBs. *See* Ultrafine DNA bridges
 Ultrafine DNA bridges (UFBs)
 aberrations, 192, 357

centromeres, 188
 common fragile sites, 188
 homologous recombination-ultrafine bridges and chromosome aberrations, 210
 origins, 187–188
 rDNA loci, 189
 recognition and processing proteins
 BLM, 189–190
 FANCM, 190
 PICH, 189
 RIF1, 190
 RPA, 190
 TOPBP1, 190
 Topo II, 190
 reconstitution, 190–192
 telomeres, 188–189
 Unfinished replication. *See* Polytene chromosome; Topologically associating domain
 USP38, 138

W

Wap1, 50
 WAPL, 352
 Wip1, 86
Wnt6, 274

X

XIAP, 177
Xic, 270, 272
XIST, 289
Xist, 270
xol-1, 283–285
 XPF, 17
 XPF, 207–208, 224, 238
 XPF-1, 229
 XPG, 17
 XRN-2, 20

Y

Y chromosome, evolution, 363–366

Z

ZHP-3, 229
 Zip1, 224
 Zip2, 224
 Zip3, 224
 ZRANB3, 341, 343–344

Cold Spring Harbor Symposia on Quantitative Biology
